

Musical Bottles Worksheet

Fill up your glass bottles with water at different levels to create sound by either blowing across the top of the bottle or tapping the bottle with a spoon. Then, use an online tuner to help identify the different pitches created by varying levels of water. Use the outline of the glass bottle below to record where the water line falls for different notes. Try to find the level for concert C, D, E, F, G, A, and B. As a bonus, find the levels for different sharp and flat notes.

What note do you find by filling the bottle halfway up with water?

Record it here: _____
